Arcane Knockout

Four-player wizard arena brawler

$30,000 funding proposal

Min Thu Kyaw | October 2026

Promotional artwork

Every hit makes the next shove stronger

Actual Unity Editor gameplay with offline bots

Build Impact

Land spells to increase an opponent's knockback.

Fight for safe ground

Arena collapse pushes the fight into less space.

Recover the round

Use movement and defensive spells to escape danger.

Five spells, chosen around your playstyle

Gravity Well • in-engine spell capture

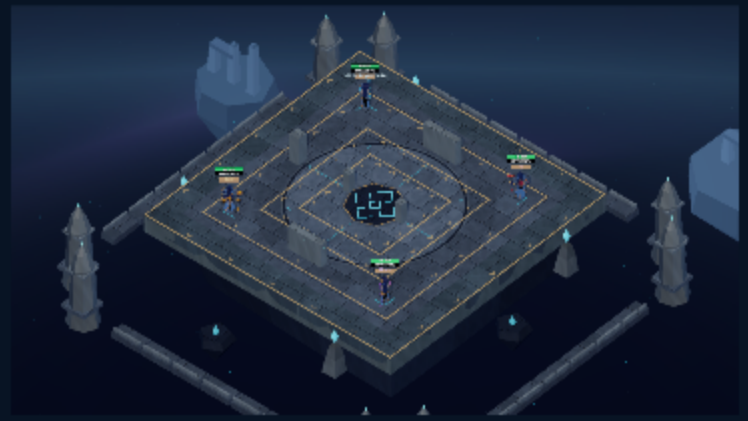

Fire Orb anchors every loadout.

Choose four secondary spells: movement, defense, direct attack and area control.

Win rounds, then adapt.

Choose upgrades between rounds. First to five round wins takes the match.

Three arenas that change the fight

Arcane Citadel

Molten Crucible

Venom Sanctum

Free-for-all or 2v2 Team Survival

Survival allows a recovery from danger. Sudden Knockout uses instant ring-outs.

In-engine arena captures with staged cameras

A playable prototype is ready to review

Actual Unity Editor gameplay with offline bots

Online play still needs external validation.

Android APK

Preferred touchscreen experience
Android 8.0+ / ARM64

Windows x64 ZIP

Extract and run the prototype.
Start with offline bot matches.

Watch 90 seconds of gameplay

Competitive mobile play, cosmetic purchases

Designed for players who enjoy

Spell duels, tactical positioning and comebacks in competitive arena matches.

Planned revenue model

Optional wizard skins, staff designs and visual customization. Purchases would not increase spell power.

Pre-launch • Cosmetic purchases are not implemented or validated.

The next milestone is external validation

Prototype playtest questions

Can new players understand and use the full spell loadout?

Does online combat stay responsive and readable on target devices?

Do players want another match after learning the core loop?

First priorities: clearer spell controls, multiplayer testing and device performance.

Solo today. A small team with funding.

Min Thu Kyaw

Software engineer and AI product manager

“I started ArcaneKnockout to make a game I wanted to play myself.”

Current

Solo developer, using AI-assisted coding.

Planned after funding

Hire two developers for gameplay, networking, performance and release preparation.

Personal portfolio: minthukyaw.com

Four funded months toward a 2027 release

Period	Main work	Review outcome
Month 1	Onboard hires, improve controls and finish core gameplay	A clearer, complete core loop
Month 2	Polish content, UI and audio Validate networking and performance	Build ready for external tests
Month 3	Run multiplayer and external playtests Resolve crashes, balance and usability	Evidence for release decisions
Month 4	Complete QA and store preparation Fix remaining release blockers	Release candidate if criteria are met

PR and marketing run during months 2–4.

Timing depends on funding, recruitment and validation. The 2027 date is a target.

$30,000 covers the four-month proposal

Budget item	USD
Founder + two planned developers	18,000
Art and UI assets	3,000
Audio and music	500
QA and device coverage	1,500
Hosting and tools	300
Publishing and admin	100
PR and marketing	3,000
Contingency	3,600
Total requested	**30,000**

Development allowance

3 people × 4 months
× $1,500 per month

PR and marketing

$700 press / store assets
$800 creator outreach
$1,500 paid experiments

All costs and pay rates are proposed estimates. Hires depend on funding.

Help bring ArcaneKnockout to release

$30,000

Fund four months of development, two planned hires, external testing and release preparation.
